NEW! FACE HUNTER II

The Face Hunter II 3D facial scanner captures the patient's face and facial expressions (digital avatar) which are then displayed in Zirkonzahn.Modifier software.

FEATURES:

- *Infrared scanning technology: scanning of the patient's face without exogenous influences (glare-free for maximum comfort)*
- *Integrated lighting: photorealistic patient's representation without flash lighting*
- *Various acquisition modes: single shots are captured in less than 0.1 seconds, while multi-shot recordings allow up to 16 scans per second*
- *3D face tracking: mode for capturing the patient's facial expressions*
- *Data management: the Face Hunter software supports the display, alignment, merging, and storage of all necessary data, including intraoral scans, temporomandibular joint data, segmented DICOM data (Bone Doctor software module), reference scans, etc.*
- *Flexibility: face scans can be saved as single scans (static) or dynamic animations (with the patient's facial expressions)*
